Safety Precautions

Read these safety considerations for operations carefully before installing air conditioning equipment. After completing the installation, make sure that the unit operates properly during the startup operation. Instruct the customer on how to operate and maintain the unit.

Inform customers that they should store this operation manual with the installation manual for future reference.

Meanings of DANGER, WARNING, CAUTION, and NOTE Symbols:

<table>
<thead>
<tr>
<th>DANGER</th>
<th>WARNING</th>
<th>CAUTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>Indicates an imminently hazardous situation which, if not avoided, will result in death or serious injury.</td>
<td>Indicates a potentially hazardous situation which, if not avoided, could result in death or serious injury.</td>
<td>Indicates a potentially hazardous situation which, if not avoided, may result in minor or moderate injury. It may also be used to alert against unsafe practices.</td>
</tr>
</tbody>
</table>

DANGER
- For refrigerant leakage, consult your dealer.
- Refrigerant gas is heavier than air and replaces oxygen. A massive leak could lead to oxygen depletion, especially in basements, and an asphyxiation hazard could occur leading to serious injury or death.
- Refrigerant gas may produce a toxic gas if it comes in contact with fire such as from a fan heater, stove or cooking device. Exposure to this gas could cause severe injury or death.
- Any abnormalities in the operation of the air conditioner such as smoke or fire could result in severe injury or death.
- Turn off the power and contact your dealer immediately for instructions.
- Do not install the unit in an area where flammable materials are present due to risk of explosion resulting in serious injury or death.
- If equipment utilizing a burner is used in the same room as the air conditioner, there is the danger of oxygen deficiency which could lead to an asphyxiation hazard resulting in serious injury or death.
- Be sure to ventilate the room sufficiently to avoid this hazard.
- Safely dispose of the packing materials.
- Packing materials, such as nails and other metal or wooden parts, may cause stabs or other injuries. Tear apart and throw away plastic packaging bags so that children will not play with them. Children playing with plastic bags face the danger of death by suffocation.

WARNING
- It is not good for health to expose your body to the air flow for a long time.
- Do not put your finger or other objects into the air outlet or inlet as the fan is rotating at high speed and could cause injury. Always keep small children away from the unit during operation.
- Do not attempt to repair, relocate, modify or reinstall the air conditioner by yourself. Incorrect work or modifications could cause electric shocks, fire or other damage. For repairs and reinstallation, consult your Daikin dealer for advice and information.
- If the air conditioner is not cooling (heating) properly, the refrigerant may be leaking, contact your authorized dealer or qualified service repairman.
- When making repairs which requires adding refrigerant, consult with your authorized dealer or qualified service repairman.
- Do not attempt to install the air conditioner by yourself. Improper installation could result in water leakage, electric shocks or fire. For installation, consult your authorized dealer or a qualified technician.

CAUTION
- The air conditioner must be grounded. Improper grounding may result in electric shocks. Do not connect the grounding wire to a gas pipe, water pipe, lightning rod, or a telephone ground line. Follow all local and state electrical codes.
- Do not use this unit for cooling precision instruments, food, plants, animals or works of art.
- Never expose little children, plants or animals directly to the air flow.
- Do not block air inlets nor outlets. Impaired air flow may result in poor performance or equipment problems.
- Do not stand, sit, or place objects on the outdoor unit. To avoid injury, do not remove the fan guard.
**CAUTION**

- Do not place anything under the indoor or outdoor unit that must be kept away from moisture, such as electrical or electronic equipment. In certain conditions, moisture in the air may condense and drip.
- Check the unit stand and fittings for damage annually.
- Do not touch the air inlet and aluminum fins of outdoor unit. It may cause injury and/or damage the heat transfer surface.
- This appliance is NOT intended for use by young children or impaired persons without proper supervision.
- Young children should be supervised to ensure that they DO NOT play with or near the air flow of this appliance.
- Do not pull at the conduit or hang anything on it. Otherwise it will cause fire or electric shock.
- Do not touch the heat exchanger fins. Improper handling may result in injury.
- Do not turn off the power immediately after stopping operation. Always wait at least 5 minutes before turning off the power to avoid water leakage or other problems.

- To avoid personal injury or equipment damage be sure to stop the operation, turn the breaker off or pull out the supply cord before cleaning or servicing the unit. NOTE: More than one disconnect may be required to shut off all power.
- Do not connect the air conditioner to a power supply different from the one specified. It may cause improper operation or fire.
- Depending on the environment, state and local electrical codes, a ground fault circuit interrupter may be required. Improper grounding or lack of a ground fault circuit interrupter may result in electrical shock, injuries, or death.
- It is recommended to install a ground fault circuit interrupter if one is not already available. This helps prevent electrical shocks or fire.
- Arrange the drain hose to ensure smooth drainage. Improper drainage may cause water damage to the building, or its furnishing.
- Depending on the usage environment, water may leak from the air conditioner. If this happens, contact your Daikin Dealer.
- The remote controller should be installed in such away that children cannot play with it.
- Do not place objects in direct proximity of the outdoor unit and do not let leaves and other debris accumulate around the unit.
- Leaves are a hotbed for small animals which can enter the unit. Once in the unit, such animals can cause malfunctions, smoke or fire when making contact with electrical parts.

**Installation site.**

- Operate the air conditioner in a sufficiently ventilated area and not surrounded by obstacles. Do not use the air conditioner in the following places.
  a. Places with a mist of mineral oil, such as cutting oil.
  b. Locations such as coastal areas where there is a lot of salt in the air.
  c. Locations such as hot springs where there is a lot of sulfur in the air.
  d. Locations such as factories where the power voltage varies a lot.
  e. In cars, boats, and other vehicles.
  f. Locations such as kitchens where oil may splatter or where there is steam in the air.
  g. Locations where equipment produces electromagnetic waves.
  h. Places with an acid or alkaline mist.
  i. Places where fallen leaves can accumulate or where weeds can grow.

**Consider the nuisance of noise to your neighbors.**

- Pay Attention to Operating Sound. Be sure to use the following places:
  a. Places that can sufficiently withstand the weight of the air conditioner yet can suppress the operating sound and vibration of the air conditioner.
  b. Places where warm air from the air outlet of the outside unit or the operating sound of the outside unit does not annoy neighbors. Make sure that there are no obstacles close to the outside unit. Obstacles close to the outside unit may drop the performance of the outside unit or increase the operating sound of the outside unit.
  Consult your dealer if the air conditioner in operation generates unusual noise.

**Electrical work.**

- For power supply, be sure to use a separate power circuit dedicated to the air conditioner.

**System relocation.**

- Relocating the air conditioner requires specialized knowledge and skills. Please consult the dealer if relocation is necessary for moving or remodeling.
Name of Parts

Indoor Unit

- Air inlet
- Front panel
- Air outlet
- Panel tab
- Room temperature sensor
  - Detects the movements of people and automatically switches between normal operation and energy saving operation.
- Fins (vertical blades)
  - The fins are inside of the air outlet.
- Louvers (horizontal blades)
- Packaging materials
  - If any packaging materials are included, please remove before operating.
- INTELLIGENT EYE sensor
- Room temperature sensor
  - Detects the air temperature around the unit.
- Display

  OPERATION lamp (green)
  TIMER lamp (yellow)
  HOME LEAVE lamp (red)

  Signal receiver
  - Receives signals from the remote controller.
  - When the unit receives a signal, you will hear a short beep.
  - Operation start beep-beep
  - Settings changed beep
  - Operation stop beeeep

  Indoor unit ON/OFF switch
  - Press this switch once to start operation.
  - Press once again to stop it.
  - The operation mode refer to the following table.

<table>
<thead>
<tr>
<th>Mode</th>
<th>Temperature setting</th>
<th>Airflow rate</th>
</tr>
</thead>
<tbody>
<tr>
<td>AUTO</td>
<td>77°F (25°C)</td>
<td>AUTO</td>
</tr>
</tbody>
</table>

- This switch is useful when the remote controller is missing.
Open the front panel

Outdoor Unit

- Appearance of the outdoor unit may differ from some models.

Air filter

Air-purifying filter with photocatalytic deodorizing function

Air inlet (back and side)

Air outlet

Refrigerant piping and inter-unit wiring

Ground terminal
- Inside of this cover.

Drain hose
To use the remote controller, aim the transmitter at the indoor unit. If there is anything to block signals between the unit and the remote controller, such as a curtain, the unit will not operate.

Do not drop the remote controller. Do not get it wet.

The maximum distance for communication is approximately 23ft. (7m).

• To use the remote controller, aim the transmitter at the indoor unit. If there is anything to block signals between the unit and the remote controller, such as a curtain, the unit will not operate.
• Do not drop the remote controller. Do not get it wet.
• The maximum distance for communication is approximately 23ft. (7m).

FAN setting button
- Selects the airflow rate setting. Page 11

POWERFUL button
- POWERFUL operation Page 16

Display (LCD)
- Displays the current settings. (In this illustration, each section is shown with its displays on for the purpose of explanation.)

TEMPERATURE adjustment buttons
- Changes the temperature setting. Page 10

ON/OFF button
- Press this button once to start operation. Press once again to stop it. Page 10

Front cover
- Open the front cover Page 7
**Open the front cover**

- **MODE selector button**
  - Selects the operation mode. (AUTO/DRY/COOL/HEAT/FAN)

  - Cancels the timer setting.  
  - Page 20, 21

- **SELECT button**
  - Changes the ON/OFF TIMER settings.  
  - Page 20, 21
Preparation before Operation

■ To set the batteries

1. Slide the front cover to take it off.
2. Set two dry batteries AAA.LR03 (alkaline).
3. Set the front cover as before.

■ To fix the remote controller holder on the wall

1. Choose a place from where the signals reach the unit.
2. Fix the holder to a wall, a pillar with the screws supplied with the holder.
3. Place the remote controller in the remote controller holder.

■ Celsius/Fahrenheit display switch

- The Celsius or Fahrenheit display is selectable with the following buttons.

Press \[ \Delta \] and \[ \nabla \] simultaneously for 5 seconds.

- The temperature will be displayed in Fahrenheit if it is presently displayed in Celsius, and vice versa.

ATTENTION

■ About batteries

- When replacing the batteries, use batteries of the same type, and replace both batteries at the same time.
- When the system is not used for a long time, take the batteries out.
- The batteries will last for approximately 1 year. If the remote controller display begins to fade and the degradation of reception performance occurs within a year, however, replace both batteries with new, size AAA.LR03 (alkaline).
- The attached batteries are provided for the initial use of the system.
- The usable period of the batteries may be short depending on the manufactured date of the air conditioner.

■ About remote controller

- Never expose the remote controller to direct sunlight.
- Dust on the signal transmitter or receiver will reduce the sensitivity. Wipe off dust with a soft cloth.
- Signal communication may be disabled if an electronic-starter-type fluorescent lamp (such as inverter-type lamps) is in the room. Consult the shop if that is the case.
- If the remote controller signals happen to operate another appliance, move that appliance somewhere else, or consult the service shop.

■ Celsius/Fahrenheit display change function of remote controller

- The set temperature may increase when the display is changed to Celsius from Fahrenheit, because a fraction of 0.5°C is rounded up.
- Example: A set temperature of 64°F (equivalent to 18.5°C) will be converted into 19°C.
  - When the display is changed to Fahrenheit again, the set temperature will be converted into 66°F (equivalent to 19°C) instead of the original set temperature (64°F) but a set temperature of 66°F (equivalent to 19°C) will be converted into 19°C with no temperature change.
- A reception sound will go off for the transmission of set temperature to the indoor unit at the time of setting the Celsius/Fahrenheit display change function.
Turn the breaker on
• Turning on the breaker closes the louvers. (This is a normal procedure.)

To set the clock

1. Press \[\text{\textbullet}\].
   "00:00" is displayed.
   "MON" and "\[\text{\textbullet}\]" blinks.

2. Press \[\text{\textbullet}\] to set the current day of the week.

3. Press \[\text{\textbullet}\].
   "\[\text{\textbullet}\]" blinks.

4. Press \[\text{\textbullet}\] to set the clock to the present time.
   • Holding down \[\text{\textbullet}\] or \[\text{\textbullet}\] rapidly increases or decreases the time display.

5. Press \[\text{\textbullet}\].
   • Always point the remote controller at the indoor unit when pressing the buttons when setting the indoor unit’s internal clock.

NOTE

Tips for saving energy
• Be careful not to cool (heat) the room too much.
  Keeping the temperature setting at a moderate level helps save energy.
• Cover windows with a blind or a curtain.
  Blocking sunlight and air from outdoors increases the cooling (heating) effect.
• Clogged air filters cause inefficient operation and waste energy. Clean them once in about every 2 weeks.

Please note
• The air conditioner always consumes 50-120btu/h (15-35W) of electricity even while it is not operating.
• If you are not going to use the air conditioner for a long period, for example in spring or autumn, turn the breaker off.
• Use the air conditioner in the following conditions.

<table>
<thead>
<tr>
<th>Mode</th>
<th>Operating conditions</th>
<th>If operation is continued out of this range</th>
</tr>
</thead>
</table>
| COOL | Outdoor temperature: 14-115°F (–10-46°C)  
Indoor temperature: 64-90°F (18-32°C)  
Indoor humidity: 80% max. | • A safety device may work to stop the operation.  
(In multi system, it may work to stop the operation of the outdoor unit only.)  
• Condensation may occur on the indoor unit and drip. |
| HEAT | Outdoor temperature: 5-64°F (–15-18°C)  
Indoor temperature: 50-86°F (10-30°C) | • A safety device may work to stop the operation.  
• Condensation may occur on the indoor unit and drip. |
| DRY  | Outdoor temperature: 14-115°F (–10-46°C)  
Indoor temperature: 64-90°F (18-32°C)  
Indoor humidity: 80% max. | • A safety device may work to stop the operation.  
• Condensation may occur on the indoor unit and drip. |

Recommended temperature setting
For cooling: 78-82°F (26-28°C)
For heating: 68-75°F (20-24°C)

• Operation outside this humidity or temperature range may cause a safety device to disable the system.
The air conditioner operates with the operation mode of your choice. From the next time on, the air conditioner will operate with the same operation mode.

To start operation

1. Press **MODE** and select an operation mode.
   - Each pressing of the button advances the mode setting in sequence.

   AUTO → DRY → COOL → HEAT → FAN

2. Press **ON/OFF**
   - “**ON**” is displayed on the LCD.
   - The OPERATION lamp lights up.

To stop operation

Press **ON/OFF** again.
- “**ON**” is no longer displayed on the LCD.
- The OPERATION lamp goes off.

To change the temperature setting

Press **TEMP/°C**

The displayed items on the LCD will change whenever either one of the buttons is pressed.

<table>
<thead>
<tr>
<th>DRY or FAN operation</th>
<th>COOL operation</th>
<th>HEAT operation</th>
<th>AUTO operation</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>64-90°F (18-32°C)</td>
<td>50-86°F (10-30°C)</td>
<td>64-86°F (18-30°C)</td>
</tr>
<tr>
<td>The temperature setting is not variable.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Press ▲ to raise the temperature and press ▼ to lower the temperature.</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
To change the airflow rate setting

Press \( \mathcal{A} \).  

<table>
<thead>
<tr>
<th>DRY operation</th>
<th>AUTO or COOL or HEAT or FAN operation</th>
</tr>
</thead>
<tbody>
<tr>
<td>The airflow rate setting is not variable.</td>
<td>5 levels of airflow rate setting from ( \mathcal{O} ) to ( \mathcal{O} ) plus ( \mathcal{O} ) and ( \mathcal{O} ) are available.</td>
</tr>
</tbody>
</table>

\[\text{\( \mathcal{O} \) to \( \mathcal{O} \)}}\]

- Indoor unit quiet operation
  When the airflow is set to \( \mathcal{O} \), the noise from the indoor unit will become quieter.
  Use this when making the noise quieter.
  The unit might lose capacity when the airflow rate is set to a weak level.
- Each pressing of the button advances the airflow rate setting in sequence.

**NOTE**

- **Notes on HEAT operation**
  - Since this air conditioner heats the room by taking heat from outdoor air to indoors, the heating capacity becomes smaller in lower outdoor temperatures. If the heating effect is insufficient, it is recommended to use another heating appliance in combination with the air conditioner.
  - The heat pump system heats the room by circulating hot air around all parts of the room. After the start of HEAT operation, it takes some time before the room gets warmer.
  - In HEAT operation, frost may occur on the outdoor unit and lower the heating capacity. In that case, the system switches into defrosting operation to take away the frost.
  - During defrosting operation, hot air does not flow out of indoor unit.
- **Note on COOL operation**
  - This air conditioner cools the room by blowing the hot air in the room outside, so if the outside temperature is high, the performance of the air conditioner drops.
- **Note on DRY operation**
  - The computer chip works to rid the room of humidity while maintaining the temperature as much as possible. It automatically controls temperature and airflow rate, so manual adjustment of these functions is unavailable.
- **Notes on AUTO operation**
  - In AUTO operation, the system selects a temperature setting and an appropriate operation mode (COOL or HEAT) based on the room temperature at the start of the operation.
  - The system automatically reselects setting at a regular interval to bring the room temperature to user-setting level.
- **Note on FAN operation**
  - This is valid for fan only.
- **Note on airflow rate setting**
  - At smaller airflow rates, the cooling (heating) effect is also smaller.
Adjusting the Airflow Direction

You can adjust the airflow direction to increase your comfort.

### Adjusting the upper and lower airflow direction

- **To adjust the louvers (horizontal blades)**

1. **Press** 🎈.
   - "女排" is displayed on the LCD and the louvers will begin to swing.

2. **When the louvers have reached the desired position, press 🎈 once more.**
   - The louvers will stop moving.
   - "女排" is no longer displayed on the LCD.

### Adjusting the right and left airflow direction

- **To adjust the fins (vertical blades)**

3. **Press** 🌊.
   - "🌊” is displayed on the LCD.

4. **When the fins have reached the desired position, press 🌊 once more.**
   - The fins will stop moving.
   - "🌊” is no longer displayed on the LCD.
To start 3-D airflow

1. 3. Press the \( \text{ } \) and the \( \text{ } \): the “” and “” display will light up and the louvers and fins will move in turn.

To cancel 3-D airflow

2. 4. Press either the \( \text{ } \) or the \( \text{ } \).

NOTE

- Note on the angles of the louvers
  - When \( \text{ } \) is selected, the louvers swinging range depends on the operation. (See the figure.)

- Note on 3-D airflow
  - Using 3-D airflow circulates cold air, which tends to collect at the bottom of the room, and hot air, which tends to collect near the ceiling, throughout the room, preventing areas of cold and hot developing.

- ATTENTION
  - Always use a remote controller to adjust the angles of the louvers and fins. If you attempt to move it forcibly with hand when it is swinging, the mechanism may be broken.
  - Always use a remote controller to adjust the fins angles. Inside the air outlet, a fan is rotating at a high speed.

COOL and DRY operation

- COOL: approximately 10-40°
- DRY: approximately 5-30°

HEAT and FAN operation

- HEAT: approximately 15-55°
- FAN: approximately 5-55°
INTELLIGENT EYE Operation

“INTELLIGENT EYE” is the infrared sensor which detects the human movement.

- To start INTELLIGENT EYE operation
  1. Press \[\text{• } \text{•} \text{•} \text{•}\].
     • “ \[\text{•} \text{•} \text{•} \text{•}\]” is displayed on the LCD.

- To cancel INTELLIGENT EYE operation
  2. Press \[\text{• } \text{•} \text{•} \text{•}\] again.
     • “ \[\text{•} \text{•} \text{•} \text{•}\]” is no longer displayed on the LCD.

[Example]

- **When somebody in the room**
  - Normal operation
    The air conditioner is in normal operation while the sensor is detecting the movement of people.

- **When nobody in the room**
  - 20 minutes after, start energy saving operation.
    The set temperature is shifted in ±3.6°F (±2°C) steps.

- **Somebody back in the room**
  - Back to normal operation.
    The air conditioner will return to normal operation when the sensor detects the movement of people again.
“INTELLIGENT EYE” is useful for energy saving

- **Energy saving operation**
  - Change the temperature –3.6°F (–2°C) in HEAT / +3.6°F (+2°C) in COOL / +1.8°F (+1°C) in DRY operation from set temperature.
  - Decrease the airflow rate slightly in FAN operation only.
  - If no presence detected in the room for 20 minutes.

- **NOTE**
  - **Application range is as follows.**
  - Vertical angle 90° (Side view)  Horizontal angle 110° (Top view)

  ![Diagram](image)

  - Sensor may not detect moving objects further than 23ft. (7m) away. (Check the application range.)
  - Sensor detection sensitivity changes according to indoor unit location, the speed of passersby, temperature range, etc.
  - The sensor also mistakenly detects pets, sunlight, fluttering curtains and light reflected off of mirrors as passersby.
  - **INTELLIGENT EYE operation** will not go on during POWERFUL operation.
  - **NIGHT SET mode** will not go on during use of INTELLIGENT EYE operation.

- **CAUTION**
  - Do not place large objects near the sensor.
  - Also keep heating units or humidifiers outside the sensor’s detection area. This sensor can detect undesirable objects.
  - Do not hit or forcefully push the INTELLIGENT EYE sensor. This can lead to damage and malfunction.
POWERFUL Operation

POWERFUL operation quickly maximizes the cooling (heating) effect in any operation mode. You can get the maximum capacity.

■ To start POWERFUL operation

Press \ during operation.

- POWERFUL operation ends in 20 minutes. Then the system automatically operates again with the previous settings which were used before POWERFUL operation.
- "P" is displayed on the LCD.
- When using POWERFUL operation, there are some functions which are not available.

■ To cancel POWERFUL operation

Press \ again.

- "P" is no longer displayed on the LCD.

NOTE

Notes on POWERFUL operation
- POWERFUL operation cannot be used together with QUIET operation. Priority is given to the function of whichever button is pressed last.

■ In COOL and HEAT operation
  To maximize the cooling (heating) effect, the capacity of outdoor unit must be increased and the airflow rate be fixed to the maximum setting.
  The temperature and airflow settings are not variable.

■ In DRY operation
  The temperature setting is lowered by 4.5°F (2.5°C) and the airflow rate is slightly increased.

■ In FAN operation
  The airflow rate is fixed to the maximum setting.

■ In AUTO operation
  To maximize the cooling (heating) effect, the capacity of outdoor unit must be increased and the airflow rate be fixed to the maximum setting.
  POWERFUL operation will not increase the capacity of the air conditioner if the air conditioner is already in operation with its maximum capacity demonstrated.
OUTDOOR UNIT QUIET Operation

OUTDOOR UNIT QUIET operation lowers the noise level of the outdoor unit by changing the frequency and fan speed on the outdoor unit. This function is convenient during night.

■ To start OUTDOOR UNIT QUIET operation

Press  画面.  
• 画面 is displayed on the LCD.

■ To cancel OUTDOOR UNIT QUIET operation

Press 画面 again.  
• 画面 is no longer displayed on the LCD.

NOTE

■ Notes on OUTDOOR UNIT QUIET operation
  • If using a multi system, this function will work only when the OUTDOOR UNIT QUIET operation is set on all operated indoor units. However, if using priority room setting, see note for multi system. Page 22
  • This function is available in COOL, HEAT, and AUTO operation. (This is not available in FAN and DRY operation.)
  • POWERFUL operation and OUTDOOR UNIT QUIET operation cannot be used at the same time. Priority is given to the function of whichever button is pressed last.
  • If operation is stopped using the remote controller or the indoor unit ON/OFF switch when using OUTDOOR UNIT QUIET operation, 画面 will remain on the remote controller display.
  • OUTDOOR UNIT QUIET operation will drop neither the frequency nor fan speed if the frequency and fan speed have been already dropped low enough.
HOME LEAVE Operation

HOME LEAVE operation is a function which allows you to record your preferred temperature and airflow rate settings.

To start HOME LEAVE operation

1. Press .
   - * is displayed on the LCD.
   - The HOME LEAVE lamp lights up.

To cancel HOME LEAVE operation

2. Press again.
   - * is no longer displayed on the LCD.
   - The HOME LEAVE lamp goes off.

Before using HOME LEAVE operation.

To set the temperature and airflow rate for HOME LEAVE operation

When using HOME LEAVE operation for the first time, please set the temperature and airflow rate for HOME LEAVE operation. Record your preferred temperature and airflow rate.

<table>
<thead>
<tr>
<th>Initial setting</th>
<th>Selectable range</th>
</tr>
</thead>
<tbody>
<tr>
<td>Temperature</td>
<td>Airflow rate</td>
</tr>
<tr>
<td>Cooling</td>
<td>AUTO</td>
</tr>
<tr>
<td>Heating</td>
<td>AUTO</td>
</tr>
</tbody>
</table>

1. Press . Make sure * is displayed in the remote controller display.
2. Adjust the set temperature with or as you like.
3. Adjust the airflow rate with FAN setting button as you like.

HOME LEAVE operation will run with these settings the next time you use the unit. To change the recorded information, repeat steps 1 – 3.
What’s the HOME LEAVE operation?

Is there a set temperature and airflow rate which is most comfortable, a set temperature and airflow rate which you use the most? HOME LEAVE operation is a function that allows you to record your favorite set temperature and airflow rate. You can start your favorite operation mode simply by pressing on the remote controller. This function is convenient in the following situations.

Useful in these cases

1. Use as an energy-saving mode.

Set the temperature 3-5°F(2-3°C) higher (COOL) or lower (HEAT) than normal. Setting the fan speed to the lowest setting allows the unit to be used in energy-saving mode. Also convenient for use while you are out or sleeping.

• Every day before you leave the house...

When you go out, press and the air conditioner will adjust capacity to reach the preset temperature for HOME LEAVE operation.

When you return, you will be welcomed by a comfortably air conditioned room.

Press again, and the air conditioner will adjust capacity to the set temperature for normal operation.

• Before bed...

Set the unit to HOME LEAVE operation before leaving the living room when going to bed.

The unit will maintain the temperature in the room at a comfortable level while you sleep.

When you enter the living room in the morning, the temperature will be just right. Disengaging HOME LEAVE operation will return the temperature to that set for normal operation. Even the coldest winters will pose no problem!

2. Use as a favorite mode.

Once you record the temperature and airflow rate settings you most often use, you can retrieve them by pressing . You do not have to make all the selections again.

NOTE

• Once the temperature and airflow rate for HOME LEAVE operation are set, those settings will be used whenever HOME LEAVE operation is used in the future. To change these settings, please refer to the before using HOME LEAVE operation section above.

• HOME LEAVE operation is only available in COOL and HEAT operation. It cannot be used in AUTO, DRY, and FAN operation.

• HOME LEAVE operation and POWERFUL operation cannot be used at the same time. Last button that was pressed has priority.

• The operation mode cannot be changed while HOME LEAVE operation is being used.

• When operation is shut off during HOME LEAVE operation, using the remote controller or the indoor unit ON/OFF switch, " " will remain on the remote controller display.
TIMER Operation

Timer functions are useful for automatically switching the air conditioner on or off at night or in the morning. You can also use OFF TIMER and ON TIMER in combination.

- **To use OFF TIMER operation**
  - Check that the clock is correct.
  - If not, set the clock to the present time. ![Page](https://example.com)

1. **Press OFF.**
   - “000” is displayed.
   - “OFF” blinks.

2. **Press [SELECT] until the time setting reaches the point you like.**
   - Each pressing of either button increases or decreases the time setting by 10 minutes. Holding down either button changes the setting rapidly.

3. **Press OFF again.**
   - The TIMER lamp lights up.

- **To cancel OFF TIMER operation**
  - Press [CANCEL].
  - The TIMER lamp goes off.

**NOTE**

- **Notes on TIMER operation**
  - When TIMER is set, the present time is not displayed.
  - Once you set ON/OFF TIMER, the time setting is kept in the memory. (The memory is canceled when remote controller batteries are replaced.)
  - When operating the unit via the ON/OFF TIMER, the actual length of operation may vary from the time entered by the user. (Maximum approximately 10 minutes)
  - **NIGHT SET mode**
    - When the OFF TIMER is set, the air conditioner automatically adjusts the temperature setting (0.9°F (0.5°C) up in COOL, 3.6°F (2.0°C) down in HEAT) to prevent excessive cooling (heating) for your pleasant sleep.
To use ON TIMER operation

- Check that the clock is correct.
  If not, set the clock to the present time. \(\text{Page 9}\)

1. Press \[\text{ON}\].
   - \(6:00\) is displayed.
   - \(\text{ON}^*\) blinks.

2. Press \[\text{SELECT}\] until the time setting reaches the point you like.
   - Each pressing of either button increases or decreases the time setting by 10 minutes. Holding down either button changes the setting rapidly.

3. Press \[\text{ON}\] again.
   - The TIMER lamp lights up.

To cancel ON TIMER operation

Press \[\text{CANCEL}\].
   - The TIMER lamp goes off.

To combine ON TIMER and OFF TIMER

- A sample setting for combining the two timers is shown below.

<table>
<thead>
<tr>
<th>Example</th>
<th>Present time: 23:00 (The unit operating)</th>
</tr>
</thead>
<tbody>
<tr>
<td>OFF TIMER at 0:00</td>
<td>Combined</td>
</tr>
<tr>
<td>ON TIMER at 14:00</td>
<td></td>
</tr>
</tbody>
</table>

**ATTENTION**

- In the following cases, set the timer again.
  - After a breaker has turned off.
  - After a power failure.
  - After replacing batteries in the remote controller.
Note for Multi System

What is a multi system?
This system has one outdoor unit connected to multiple indoor units.

Selecting the operation mode

1. With the priority room setting present but inactive or not present.
   When more than one indoor unit is operating, priority is given to the first unit that was turned on.
   In this case, set the units that are turned on later to the same operation mode (*1) as the first unit.
   Otherwise, they will enter the standby state, and the OPERATION lamp will flash: this does not indicate malfunction.
   (*1) • COOL, DRY and FAN operation may be used at the same time.
   • AUTO operation automatically selects COOL operation or HEAT operation based on the room temperature.
   Therefore, AUTO operation is available when selecting the same operation mode as that of the room with the first unit to be turned on.

   CAUTION
   • Normally, the operation mode in the room where the unit is first run is given priority, but the following situations are exceptions, so please keep this in mind.
   If the operation mode of the first room is FAN operation, then using HEAT operation in any room after this will give priority to HEAT operation.
   In this situation, the air conditioner running in FAN operation will go on standby, and the OPERATION lamp will flash.

2. With the priority room setting active.
   See priority room setting on the next page.

NIGHTQUIET mode (Available only for COOL operation)
NIGHT QUIET mode requires initial programming during installation. Please consult your retailer or dealer for assistance.
NIGHT QUIET mode reduces the operation noise of the outdoor unit during the nighttime hours to prevent annoyance to neighbors.
• The NIGHT QUIET mode is activated when the temperature drops 9°F (5°C) or more below the highest temperature recorded that day. Therefore, when the temperature difference is less than 9°F (5°C), this function will not be activated.
• NIGHT QUIET mode reduces slightly the cooling efficiency of the unit.
OUTDOOR UNIT QUIET operation

1. With the priority room setting present but inactive or not present.
   When using the OUTDOOR UNIT QUIET operation feature with the multi system, set all indoor units to OUTDOOR UNIT QUIET operation using their remote controllers.
   When clearing OUTDOOR UNIT QUIET operation, clear one of the operating indoor units using its remote controller.
   The OUTDOOR UNIT QUIET operation display remains on the remote controller for other rooms.
   We recommend you release all rooms using their remote controllers.

2. With the priority room setting active.
   See priority room setting.

COOL/HEAT mode lock (Available only for heat pump models)
The COOL/HEAT mode lock requires initial programming during installation. Please consult your authorized dealer for assistance.
The COOL/HEAT mode lock sets the unit forcibly to either COOL or HEAT operation. This function is convenient when you wish to set all indoor units connected to the multi system to the same operation mode.

Priority room setting
The priority room setting requires initial programming during installation. Please consult your authorized dealer for assistance.
The room designated as the priority room takes priority in the following situations;

1. Operation mode priority.
   As the operation mode of the priority room takes precedence, the user can select a different operation mode from other rooms.
   < Example >
   * Room A is the priority room in the examples.
   When COOL operation is selected in room A while operating the following modes in room B:

<table>
<thead>
<tr>
<th>Operation mode in room B</th>
<th>Status of room B when the unit in room A is in COOL operation</th>
</tr>
</thead>
<tbody>
<tr>
<td>COOL or DRY or FAN</td>
<td>Current operation mode maintained</td>
</tr>
<tr>
<td>HEAT</td>
<td>The unit enters standby mode. Operation resumes when the room A unit stops operating.</td>
</tr>
<tr>
<td>AUTO</td>
<td>If the unit is set to COOL operation, it continues. If the unit is set to HEAT operation, it enters standby mode. Operation resumes when the room A unit stops operating.</td>
</tr>
</tbody>
</table>

2. Priority when POWERFUL operation is used.
   < Example >
   * Room A is the priority room in the examples.
   The indoor units in rooms A and B are all operating. If the unit in room A enters POWERFUL operation, operation capacity will be concentrated in room A. In such a case, the cooling (heating) efficiency of the units in room B may be slightly reduced.

   < Example >
   * Room A is the priority room in the examples.
   Just by setting the unit in room A to QUIET operation, the air conditioner starts OUTDOOR UNIT QUIET operation.
   You don't have to set all the operated indoor units to QUIET operation.
Care and Cleaning

CAUTION Before cleaning, be sure to stop the operation and turn the breaker off.

Units

- Indoor unit, outdoor unit and remote controller
  Wipe them with a soft cloth when dirty.

Front panel

1. Open the front panel.
   - Hold the front panel by the panel tabs on the both sides and open it.

2. Remove the front panel.
   - Slide the front panel to either the left or right and pulling it toward you.
   - This will disconnect the rotation dowel on one side.
   - Disconnect the front panel shaft on the other side in the same manner.

3. Clean the front panel.
   - Wipe it with a soft cloth soaked in water.
   - Only neutral detergent may be used.
   - If you wash the panel with water, wipe it with a dry soft cloth, and allow to dry in the shade.

4. Attach the front panel.
   - Align the front panel shaft on the left and right of the front panel with the slots, then push them all the way in.
   - Close the front panel slowly. (Press the panel at both sides and the center.)

CAUTION

- When the packaging materials are attached to the front panel, please remove them.
- Do not touch the metal parts of the indoor unit. If you touch those parts, this may cause an injury.
- When removing or attaching the front panel, use a robust and stable stool and watch your steps carefully.
- When removing or attaching the front panel, support the panel securely with hand to prevent it from falling.
- For cleaning, do not use hot water above 104°F (40°C), benzine, gasoline, thinner, nor other volatile oils, polishing compound, scrubbing brushes, nor other hand stuff.
- After cleaning, make sure that the front panel is securely fixed.
Filters

1. Open the front panel. [Page 24]

2. Pull out the air filters.
   • Push a little upwards the tab at the center of each air filter, then pull it down.

3. Take off the air-purifying filter with photocatalytic deodorizing function.
   • Press the top of the air-cleaning filter onto the tabs (3 at top). Then press the bottom of the filter up slightly, and press it onto the tabs (2 at bottom).

4. Clean or replace each filter.
   See figure.

5. Set the air filter and the air-purifying filter with photocatalytic deodorizing function as they were and close the front panel.
   • Press the front panel at both sides and the center.

⚠️ CAUTION

• Do not touch the aluminum fins by bare hand at the time of dismounting or mounting the filter.
Care and Cleaning

**Air filter**

Wash the air filters with water or clean them with vacuum cleaner.
- If the dust does not come off easily, wash them with neutral detergent thinned with lukewarm water, then dry them up in the shade.
- It is recommended to clean the air filters every 2 weeks.

**Air-purifying filter with photocatalytic deodorizing function**

The air-purifying filter with photocatalytic deodorizing function can be renewed by washing it with water once every 6 months. We recommend replacing it once every 3 years.

**[Maintenance]**

1. Vacuum dust, and soak in warm water or water for about 10 to 15 minutes if dirt is heavy.
   - Do not remove filter from frame when washing with water.

2. After washing, shake off remaining water and dry in the shade.
   - Since the material is made out of paper, do not wring out the filter when removing water from it.

**[Replacement]**

1. Remove the tabs on the filter frame and replace with a new filter.
   - Dispose of the old filters as flammable waste.
NOTE
• Operation with dirty filters:
  1) cannot deodorize the air,
  2) cannot clean the air,
  3) results in poor heating or cooling,
  4) may cause odor.
• To order air-purifying filter with photocatalytic deodorizing function contact to the service shop there you purchased the air conditioner.
• Dispose of the old filters as flammable waste.

<table>
<thead>
<tr>

<th>Part No.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Air-purifying filter with photocatalytic deodorizing function (without frame) 1 set</td>
<td>KAF952A42</td>
</tr>
</tbody>
</table>

ATTENTION
• Do not throw away the filter frame. Reuse the filter frame when replacing the air-purifying filter with photocatalytic deodorizing function.

CHECK
■ Check that the base, stand and other fittings of the outdoor unit are not decayed or corroded.
■ Check that nothing blocks the air inlets and the outlets of the indoor unit and the outdoor unit.
■ Check that the drain comes smoothly out of the drain hose during COOL or DRY operation.
  • If no drain water is seen, water may be leaking from the indoor unit. Stop operation and consult the service shop if this is the case.

Before a long idle period
1. Operate the FAN only for several hours on a nice day to dry out the inside.
   • Press [MODE] and select “” operation.
   • Press [ ] and start operation.

2. After operation stops, turn off the breaker for the room air conditioner.

3. Clean the air filters and set them again.

4. Take out batteries from the remote controller.
# Troubleshooting

These incidents are not malfunctions.

The following incidents do not indicate a malfunctioning air conditioner and have explanations. The air conditioner can continue to operate.

<table>
<thead>
<tr>
<th>Case</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Operation does not start soon.</td>
<td>• This is to protect the air conditioner.</td>
</tr>
<tr>
<td>• When “ON/OFF” button was pressed soon after operation was stopped.</td>
<td>You should wait for about 3 minutes.</td>
</tr>
<tr>
<td>• When the mode was reselected.</td>
<td></td>
</tr>
<tr>
<td>Hot air does not flow out soon after the</td>
<td>• The air conditioner is warming up. You should wait for 1 to 4 minutes.</td>

<tr>
<td>start of HEAT operation.</td>
<td>(The system is designed to start discharging air only after it has reached a certain temperature.)</td>
</tr>
<tr>
<td>The HEAT operation stops suddenly and a</td>
<td>• The system is taking away the frost on the outdoor unit.</td>
</tr>
<tr>
<td>flowing sound is heard.</td>
<td>You should wait for about 4 to 12 minutes.</td>
</tr>
<tr>
<td>The outdoor unit emits water or steam.</td>
<td>• In HEAT operation</td>
</tr>
<tr>
<td></td>
<td>• The frost on the outdoor unit melts into water when the air conditioner is in defrost operation.</td>
</tr>
<tr>
<td></td>
<td>• In COOL or DRY operation</td>
</tr>
<tr>
<td></td>
<td>• Moisture in the air condenses into water on the cool surface of outdoor unit piping and drips.</td>
</tr>
<tr>
<td>Mist comes out of the indoor unit.</td>
<td>• This happens when the air in the room is cooled into mist by the cold airflow during COOL operation.</td>
</tr>
<tr>
<td></td>
<td>• This is because the air in the room is cooled by the heat exchanger and becomes mist during defrost operation.</td>
</tr>
<tr>
<td>The indoor unit gives out odor.</td>
<td>• This happens when smells of the room, furniture, or cigarettes are absorbed into the unit and discharged with the airflow. If this happens, it is recommended to have the indoor unit washed by a technician. Consult the service shop where you purchased the air conditioner.</td>
</tr>
<tr>
<td>The outdoor fan rotates while the air</td>

<tr>
<td>out. Display runs out of control.</td>
<td></td>
</tr>
</tbody>
</table>
**Case Explanation**

### Possible sounds.

- **Flowing water**
  - Generated because the refrigerant in the air conditioner is flowing.
  - This is a pumping sound of the water in the air conditioner and heard when the water is pumped out from the air conditioner in cooling or drying operation.
  - The refrigerant flows in the air conditioner even if the air conditioner is not working when the indoor units in other rooms are in operation.

- **Blowing**
  - Generated when the flow of the refrigerant in the air conditioner is switched over.

- **Pinging**
  - Generated when the size of the air conditioner slightly expands or shrinks as a result of temperature changes.

---

**Check again.**

Please check again before calling a repair person.

<table>
<thead>
<tr>
<th>Case</th>
<th>Check</th>
</tr>
</thead>
</table>
| **The air conditioner does not operate. (OPERATION lamp is off.)** |  - Is a breaker off or a fuse blown?  
  - Is there a power failure?  
  - Are batteries set in the remote controller?  
  - Is the timer setting correct? |
| **Cooling (Heating) effect is poor.** |  - Are the air filters clean?  
  - Is there anything to block the air inlet or the outlet of the indoor and the outdoor units?  
  - Is the temperature setting appropriate?  
  - Are the windows and doors closed?  
  - Are the airflow rate and the airflow direction set appropriately? |
| **Operation stopped suddenly. (OPERATION lamp flashes.)** |  - Are the air filters clean?  
  - Is there anything to block the air inlet or the outlet of the indoor and the outdoor units?  
  - Clean the air filters or take all obstacles away and turn the breaker off. Then turn it on again and try operating the air conditioner with the remote controller. If the lamp still flashes, call the service shop where you purchased the air conditioner.  
  - Are operation modes all the same for indoor units connected to outdoor units in the multi system?  
  - If not, set all indoor units to the same operating mode and confirm that the lamps flash. Moreover, when the operating mode is in AUTO, set all indoor unit operating modes to COOL or HEAT for a moment and check again that the lamps are normal. If the lamps stop flashing after the above steps, there is no malfunction. |
| **An abnormal functioning happens during operation.** |  - The air conditioner may malfunction with lightning or radio waves. Turn the breaker off, turn it on again and try operating the air conditioner with the remote controller. |
| **The louvers do not immediately swing. The louvers move soon after startup.** |  - The air conditioner is adjusting the louvers position. The louvers will start moving soon. |
Troubleshooting

Call the service shop immediately.

WARNING

- When an abnormality (such as a burning smell) occurs, stop operation and turn the breaker off. Continued operation in an abnormal condition may result in malfunctioning, electric shocks or fire. Consult the service shop where you purchased the air conditioner.
- Do not attempt to repair or modify the air conditioner by yourself. Incorrect work may result in electric shocks or fire. Consult the service shop where you purchased the air conditioner.

If one of the following symptoms occurs, call the service shop immediately.

- The power cord is abnormally hot or damaged.
- An abnormal sound is heard during operation.
- The safety breaker, a fuse, or the ground leakage breaker cuts off the operation frequently.
- A switch or a button often fails to work properly.
- There is a burning smell.
- Water leaks from the indoor unit.

Turn the breaker off and call the service shop.

- After a power failure
  The air conditioner automatically resumes operation in about 3 minutes. Wait for it to restart.

- Lightning
  If lightning may strike the neighboring area, stop operation and turn the breaker off for system protection.

Disposal requirements

- Dismantling the unit, and treatment of refrigerant, oil, and other parts, should be done in accordance with the relevant local and national regulations.

We recommend periodic maintenance.

- In certain operating conditions, the inside of the air conditioner may get soiled after several seasons of use, resulting in poor performance. It is recommended to have periodic maintenance by a specialist aside from regular cleaning by the user.
- For specialist maintenance, contact the service shop where you purchased the air conditioner.
- The maintenance cost must be born by the user.
Fault diagnosis.

Fault diagnosis by remote controller

The remote controller can receive a corresponding error code from the indoor unit.

1. When [CANCEL] is held down for 5 seconds, a “**00**” indication blinks on the temperature display section.

2. Press [CANCEL] repeatedly until a continuous beep is produced.
