The Daikin Zoning Kit (DZK)

The optional DZK increases the flexibility of the Daikin VRV and SkyAir systems in both residential and commercial applications by adding a Zoning Box to an indoor unit fan coil (FXMQ_P or FBQ_P series, respectively) allowing several separate ducts to supply air to different individually-controlled zones. A zone can be a room, part of room, or several rooms. This flexible and scalable Zoning Kit integrates seamlessly with the indoor unit fan coil controls.

The DZK system controls work together with the regular Daikin zone controller (i.e. BRC1E73) to establish the required set-point, fan speed and mode of operation that is then requested to the VRV indoor unit via the Daikin zone controller. This allows the internal DZK control algorithms to look at the number of zone dampers in operation, and at what position the dampers need to be and adjust the VRV indoor unit operation accordingly.

The DZK system is not directly compatible with the suite of Daikin centralized control options such as iTM and iTC.

DZK BACnet® Gateway Module

If VRV systems are installed with the DZK system to accomplish a variety of zoning solutions and there is a requirement to be able to monitor and control the various DZK zone dampers from a centralized control system, it is possible to utilize the DZK BACnet Gateway module to address this solution.

The DZK BACnet Gateway module will work with any BACnet/IP compatible Building Management System.

Zoning Box with Control Board

The Zoning Box in the DZK mounts easily on Daikin’s Indoor Unit FXMQ_P or FBQ_P series fan coils. It consists of the enclosure, individually motorized dampers, and a control box. It is available in different sizes and damper configurations and by utilizing ducts for air supply it can be used to control the air temperature in up to 6 zones. The wired thermostat and the wireless thermostats provide temperature inputs and user interfaces for programming and adjustment of the control functions for each zone.

Wireless Thermostat

The wireless backlit touch-screen thermostat in the DZK can control the temperature for a zone while displaying the air temperature, system time, and day of the week. Additional functions include adjusting set point temperature, automatic configuration, local ventilation activation, and vacation mode.

A wireless thermostat is required for zones not being controlled by a wired thermostat.

Wired Thermostat

The wired thermostat in the DZK is a graphical colored, touch-screen interface with text menus, intuitive icons, and guided scheduling capability. It displays temperatures and operating values, and selects the operating mode for the system. At least one wired thermostat is required per DZK.

*“-2” in the Product Number indicates that the product has BACnet/IP functionality.
For configuration of DZK systems with BACnet/IP functionality, only Product Numbers ending with “-2” or “-2-W” can be used. For configuration of DZK systems without BACnet, either products with, or without, the BACnet functionality can be used, even “mix and match”.*
DC-Ducted Ceiling Unit

Powerful, Concealed, Flexible

When combined with the DZK, the ceiling mounted DC-Ducted unit is ideal for small to large spaces in need of a concealed air-conditioning system. It is extremely powerful and the compact design allows it to be completely concealed. This makes it perfect for retail, classrooms, offices, banks, restaurants, shops and hotels common areas.

Features and Benefits

- Capacity range up to 54 MBH.
- Energy efficient due to the DC fan motor
- Ideal to use together with the optional Daikin Zoning Kit, DZK
- Configurable auxiliary heater control logic
- Advanced economizer control logic
- Enhanced indoor air quality and LEED ready with MERV 13 filter options
- Ease of installation with auto adjusting airflow at commissioning based on external static pressure
- Flexible ductwork design with ESP capabilities up to 0.8” W.G.
- Installation flexibility with a low profile, compact design at less than 12” in height
- Easy maintenance with complete service access from below
- Option to permanently turn off the condensate pump via field settings

Auto Adjust External Static Pressure

- After installation, it is possible that the actual duct resistance is lower than expected at the time of designing. As a consequence, the air-flow will be too high.
- With the automatic air-flow adjustment function the unit can adapt its fan speed to a lower curve, so the air-flow decreases.
- The air-flow will always be within 10% of the rated air-flow because of the amount of possible fan curves (more than 8 fan curves available per model).

Additional information

Before purchasing this appliance, read important information about its estimated annual energy consumption, yearly operating cost, or energy efficiency rating that is available from your retailer.

**FXMQ-PBVJU ACCESSORIES**

- Navigation Remote Controller
- Simplified Wired Remote Controller
- Wireless Remote Controller
- Remote Sensor Kit
- Wiring Adapter PCB (interface with aux/primary heater, humidifier, OA damper/fan)
- Group Control Adapter PCB (connects to external BMS)

**FXMQ-PBVJU INSTALLATION SPACE**

- Ceiling: 99” or more if no ceiling
- Floor Surface: 99” or more if no ceiling
- Air Outlet: 18” or more
- Air Inlet: 18” or more
- a: 12” or more if one inspection hatch (17-3/4” x 17-3/4”) on the control box side and a space of 11-13/16” or more under the unit.
- a: 1” or more if an inspection hatch the size of the indoor unit plus an additional 12” or more on the control box side is installed.

Optional face plates available to provide a more intuitive user interface and disable specific functions.
